## **Units Policy**

In this monograph all the units of measure used for describing physical quantities and properties were those recommended by the *Système International d'Unités* (SI) except in some few instances where some units from the *US Customary System* (USCS) are used in conjunction. For accurate conversion factors between these units and the other non SI units (e.g., cgs, fps, Imperial, and US customary systems) please refer to the reference book of the same author:

CARDARELLI, F. (2005) *Encyclopaedia of Scientific Units, Weight and Measures. Their SI Equivalences and Origins*. Springer, New York, London, xxiv, 848 pages; ISBN 978-1-85233-682-0.

## **Books by the same author:**

## Preface

This concise monograph is primarily intended to describe the main physical and chemical properties of heavy organic liquids and dense aqueous solutions of inorganic salts used in mineralogical, metallurgical, and chemical laboratories worldwide for the separation by gravity of minerals, metallic ores, coal macerals, fossils, and gemstones, along with plastics, glasses, ceramics, and other synthetic materials. Moreover dense solutions of salts used in biology for the separation of nucleic acids, and other biological molecules of interest by density gradients centrifugation are also described.

The heavy liquids that are described in this monograph are heavy halogenated organic solvents, dense aqueous solutions of inorganic salts, low temperature molten salts, eutectic mixtures and heavy suspensions. Moreover, in order to be comprehensive, we have also included non-conventional heavy liquids rarely or never used in mineralogy but having some applications in other fields.

For several heavy liquids, it provides a detailed description of the laboratory methods and industrial processes utilized for their preparation along with the most efficient recovery and recycling techniques. Moreover, when available, the occupational health and safety information for toxic chemicals and hazardous compounds used as heavy liquids is also provided to ensure safe practices in the work place.

Finally, their potential utilization in others fields such as water-in-salts electrolytes, x-ray and radiographic contrast agents, radiation shielding, non-destructive testing (NDT), drilling fluids, ballasts and counterweights due to their high density are briefly described.

The information has been presented in such a form that mineralogists, chemists, geologists, paleontologists, biologists, metallurgists, mineral processing engineers, scientists, professors, and technologists will have access to relevant scientific and technical information supported by key data gathered from several disseminated sources from the scientific and technical literature.

# Table of Contents

<b>1 Dense Media Separation of Minerals, and Ores .....</b>	<b>25</b>
<b>1.1 Physical Quantities .....</b>	<b>25</b>
1.1.1 Mass Density .....	25
1.1.2 Temperature Dependence of the Mass Density.....	25
1.1.3 Theoretical Density or X-ray Density of Solids .....	26
1.1.4 Apparent, Bulk and Tap Densities .....	27
1.1.5 Density vs. Porosity and Void Fraction.....	27
1.1.6 Specific Weight.....	28
1.1.7 Specific Gravity .....	29
<b>1.2 Density of Mixtures .....</b>	<b>29</b>
1.2.1 Density of Solid Mixtures.....	29
1.2.2 Density of Mixtures of Miscible Liquids .....	30
<b>1.3 Mixing and Dilution Rules .....</b>	<b>30</b>
1.3.1 Masses vs. Mass Percentages .....	31
1.3.2 Volumes vs. Mass Densities.....	32
1.3.3 Masses vs. Mass Densities .....	33
<b>1.4 Size and Shape of Particles .....</b>	<b>34</b>
1.4.1 Udden and Wentworth Scales .....	35
1.4.2 Krumblein Phi Scale.....	35
1.4.3 Sieves and Mesh Sizes.....	35
1.4.4 Diameter of a circle of equal projection area.....	36
1.4.5 Diameter of a circle of equal perimeter .....	37
1.4.6 Feret Diameters.....	37
1.4.7 Sphericity Factor .....	37
1.4.8 Roundness.....	38
<b>1.5 Density Measurements: Direct Methods .....</b>	<b>38</b>
1.5.1 Buoyancy and Archimedes Principle.....	38
1.5.2 Mohr-Westphal Hydrostatic Balance .....	39
1.5.3 Pycnometers .....	41
1.5.3.1 Pycnometers for Liquids.....	41
1.5.3.2 Pycnometers for Solids .....	41
1.5.4 Helium Gas Pycnometer .....	43
1.5.5 Hydrometers .....	43
1.5.6 Calibrated Beads .....	44
<b>1.6 Density Measurements: Indirect Methods .....</b>	<b>46</b>
1.6.1 Sound Velocity .....	46
1.6.1.1 Sound Velocity in Pure Liquids.....	46
1.6.1.2 Sound Velocity in Aqueous Salt Solutions .....	47
1.6.2 Pulsed Excitation and Oscillation Frequency .....	48

<b>1.7 Viscosity Measurements .....</b>	<b>49</b>
<b>1.8 Refractometry .....</b>	<b>50</b>
1.8.1 Physical Quantities .....	50
1.8.1.1 Refractive Index .....	50
1.8.1.2 Specific Refractivity and Mass Refraction .....	51
1.8.1.3 Molar Refractivity and Molar Refraction.....	51
1.8.2 Refractivity and Refraction of Organic Liquids .....	51
1.8.3 Refractivity and Refraction of Inorganic Compounds.....	54
1.8.4 Refractivity and Refraction of Mixtures .....	57
1.8.5 Linear Interpolation Method .....	59
<b>1.9 Sink-Float Method.....</b>	<b>60</b>
1.9.1 Experimental Setup .....	61
1.9.2 Protocol .....	61
1.9.3 Limitations .....	63
<b>1.10 Grouping Minerals by Specific Gravity.....</b>	<b>63</b>
<b>1.11 Classification, Elutriation, and Fluidization.....</b>	<b>65</b>
1.11.1 Terminal Settling Velocity.....	65
1.11.2 Stokes' and Newton's Laws .....	66
1.11.3 Applicability Ranges for Settling Laws .....	68
1.11.4 Free-settling Ratios.....	69
1.11.5 Shape Factor.....	69
1.11.6 Hindered Settling.....	69
1.11.6.1 Wall Effect on Hindered Settling.....	70
1.11.6.2 Terminal Setting Velocity in Suspensions .....	71
1.11.6.3 Dynamic Viscosity of Suspensions .....	72
1.11.6.4 Syneresis .....	72
1.11.7 Fluidization .....	73
1.11.7.1 Liquid-Fluidized Bed Setup.....	73
1.11.7.2 Hydrodynamic Regimes.....	73
1.11.7.3 Minimum Fluidization Velocity.....	75
1.11.8 Hydraulic Conveying and Elutriation .....	77
1.11.9 Hydrocyclones.....	78
1.11.9.1 Principle.....	79
1.11.9.2 Design.....	79
1.11.9.3 Normalized Ratios and Nomenclature .....	80
1.11.9.4 Number of Effective Turns .....	81
1.11.9.5 Particle Size Cut-off .....	81
1.11.9.6 Fractional and Overall Collection Efficiencies.....	82
1.11.9.7 Hydrocyclone Separation Factor.....	83
<b>1.12 Centrifugation.....</b>	<b>83</b>
1.12.1 Principle.....	83
1.12.1.1 Centrifugal Force and Angular Speed .....	83

1.12.1.2	Relative Centrifugal Force.....	84
1.12.1.3	Centrifugal Terminal Settling Velocity.....	84
1.12.1.4	Sedimentation Coefficient.....	85
1.12.1.5	Sedimentation Time and Centrifuge Factor.....	85
1.12.2	Types of Laboratory Centrifuges.....	86
1.12.3	Recovery Methods.....	87
<b>1.13</b>	<b>Diffusion Columns and Density Gradients .....</b>	<b>91</b>
1.13.1	Principle.....	91
1.13.2	Test Tube Protocol .....	91
1.13.3	Gradient Columns .....	92
1.13.4	Calibration of Diffusion Columns.....	93
1.13.5	Dense Aqueous Solutions for Density Gradients.....	94
<b>2</b>	<b>Heavy Liquids .....</b>	<b>97</b>
<b>2.1</b>	<b>Halogenated Solvents .....</b>	<b>98</b>
2.1.1	Bromoform (Schröder's Liquor).....	99
2.1.1.1	Properties .....	99
2.1.1.2	Density of Bromoform vs. Temperature.....	101
2.1.1.3	Synthesis and Preparation.....	102
2.1.1.4	Solvents and Dilution.....	104
2.1.1.5	Solutions of Iodoform in Bromoform .....	116
2.1.1.6	Recovery and Purification .....	116
2.1.1.7	Toxicity and Regulations .....	117
2.1.2	1,1,2,2-Tetrabromoethane (Muthmann's Liquor) .....	118
2.1.2.1	Properties .....	118
2.1.2.2	Density of 1,1,2,2-Tetrabromoethane vs. Temperature	120
2.1.2.3	Preparation .....	121
2.1.2.4	Solvents and Dilution.....	122
2.1.2.5	Recovery and Purification .....	131
2.1.2.6	Toxicity and Regulations .....	132
2.1.3	Diiodomethane (Braun's liquor) .....	133
2.1.3.1	Properties .....	133
2.1.3.2	Density and Refractive Index vs. Temperature .....	135
2.1.3.3	Solvents and Diluents.....	137
2.1.3.4	Solutions with Iodoform and Antimony(III) iodide .....	146
2.1.3.5	Preparation .....	147
2.1.3.6	Recovery and Purification .....	147
2.1.3.7	Toxicity and Regulations .....	147
2.1.4	Deuterated Halogenated Solvents .....	148
2.1.5	Less Common Heavy Halogenated Solvents.....	149
2.1.6	Organometallic Liquids .....	151
<b>2.2</b>	<b>Dense Aqueous Solutions of Salts.....</b>	<b>153</b>
2.2.1	Selection Criteria for Dense Solution of Inorganic Salts .....	153
2.2.2	Physical Quantities for Reporting Solubility Data .....	154

2.2.2.1	Mass Fraction of Solute .....	154
2.2.2.2	Mass Solubility Ratio of Anhydrous Salt .....	154
2.2.2.3	Mass Solubility Ratio of Hydrated Salt.....	154
2.2.2.4	Molar Solubility Ratio.....	156
2.2.2.5	Molality of Solute .....	156
2.2.2.6	Mass Concentration.....	157
2.2.2.7	Molarity of Solute .....	157
2.2.2.8	Classification of Solubility Ranges .....	157
2.2.2.9	Density of Solutions of Inorganic Salts .....	158
2.2.2.10	Apparent Molal Volume of Salt .....	159
2.2.2.11	Debye-Hückel Limiting Law.....	159
2.2.2.12	Masson's Equation .....	160
2.2.2.13	Tabulated Densities of Saturated Solutions of Salts ...	162
2.2.3	Thermochemical Calculations .....	165
2.2.3.1	Enthalpy of Solution .....	165
2.2.3.2	Enthalpy of Dilution .....	169
2.2.3.3	Classification of Enthalpy of Solutions.....	170
2.2.3.4	Freezing Point Depression of Aqueous Solutions .....	170
2.2.3.5	Boiling Point Elevation of Aqueous Solutions.....	173
2.2.3.6	Adiabatic Temperature Variation (Rise or Drop) .....	175
2.2.3.7	Enthalpy of Solution of Saturated Solutions of Salts ...	177
<b>2.3</b>	<b>Salts of Inorganic Acids .....</b>	<b>179</b>
2.3.1	Fluorides.....	179
2.3.1.1	Properties of Selected Metal Fluorides .....	179
2.3.1.2	Rubidium Fluoride.....	180
2.3.1.3	Cesium Fluoride .....	182
2.3.1.4	Silver(I) Fluoride .....	184
2.3.1.5	Thallium(I) Fluoride .....	187
2.3.1.6	Antimony(III) Fluoride.....	189
2.3.2	Chlorides .....	191
2.3.2.1	Properties of Selected Metal Chlorides .....	191
2.3.2.2	Rubidium Chloride .....	193
2.3.2.3	Cesium Chloride.....	194
2.3.2.4	Zinc Chloride .....	196
2.3.2.5	Cadmium Chloride.....	200
2.3.2.6	Iron(III) Chloride.....	201
2.3.2.7	Tin(II) Chloride .....	203
2.3.2.8	Tin(IV) Chloride .....	204
2.3.2.9	Antimony(III) Chloride .....	205
2.3.2.10	Uranyl Chloride .....	207
2.3.3	Bromides .....	209
2.3.3.1	Properties of Selected Metal Bromides .....	209
2.3.3.2	Lithium Bromide .....	210
2.3.3.3	Rubidium Bromide .....	212
2.3.3.4	Cesium Bromide.....	214
2.3.3.5	Magnesium Bromide .....	215

## List of Tables

Table 1 – Equations of mixing and dilution rules.....	34
Table 2 – Definitions of Feret diameters.....	37
Table 3 – Selected materials for preparing calibrated beads or cubes .....	45
Table 4 – Density, sound velocity, and compressibility of selected halogenated solvents ....	47
Table 5 - Molar refractivities of functional organic group for sodium D-line .....	52
Table 6 – Refractive index calculations using group contributions.....	53
Table 7 – Specific refractivity and molar refraction of inorganic compounds.....	55
Table 8 – Specific (molar) refractivity, refraction of water and cesium tungstate .....	58
Table 9 – Molar and mass fractions using Gladstone-Dale and Lorentz-Lorenz equations..	59
Table 10 – Rock-forming minerals grouped by specific gravity .....	64
Table 11 – Terminal settling velocity of spherical particles vs. Reynolds number.....	67
Table 12 – Free-settling ratio vs. settling laws .....	69
Table 13 – Types of high efficiency hydrocyclones.....	81
Table 14 – Centrifugal settling velocities and sedimentation times.....	86
Table 15 – Satd. solutions of cesium and rubidium salts used for DNA isolation .....	95
Table 16 – Physical properties of the four most common heavy halogenated liquids.....	99
Table 17 – Properties of tribromomethane (bromoform) .....	101
Table 18 – Selected properties of bromoform and methanol .....	104
Table 19 – Density and refractive index of bromoform-methanol mixtures .....	105
Table 20 – Selected properties of bromoform and ethanol.....	107
Table 21 – Properties of bromoform-ethanol mixtures .....	108
Table 22 – Selected properties of bromoform and acetone .....	110
Table 23 – Properties of bromoform-acetone mixtures.....	111
Table 24 – Selected properties of bromoform and carbon tetrachloride.....	113
Table 25 – Properties of bromoform-carbon tetrachloride mixtures .....	114
Table 26 – Hazards of tribromomethane (bromoform) .....	118
Table 27 – Properties of 1,1,2,2-tetrabromooethane (acetylene tetrabromide).....	120
Table 28 – Properties of tetrabromooethane and methanol .....	122
Table 29 – Properties of tetrabromooethane-methanol mixtures.....	123
Table 30 – Properties of tetrabromooethane and acetone .....	125
Table 31 – Properties of tetrabromooethane-acetone mixtures.....	126
Table 32 – Selected properties of tetrabromooethane and carbon tetrachloride.....	128
Table 33 – Properties of tetrabromooethane-carbon tetrachloride mixtures .....	129
Table 34 – Hazards of 1,1,2,2-tetrabromooethane (acetylene tetrabromide) .....	133
Table 35 – Properties of diiodomethane (methylene iodide) .....	135
Table 36 – Selected properties of diiodomethane and benzene .....	137
Table 37 – Properties of diiodomethane-benzene mixtures .....	138
Table 38 – Selected properties of diiodomethane and chloroform.....	140
Table 39 – Properties of diiodomethane-chloroform mixtures .....	141
Table 40 – Selected properties of diiodomethane and ethanol .....	143
Table 41 – Properties of diiodomethane-ethanol mixtures .....	144
Table 42 – Hazards of diiodomethane (methylene iodide) .....	148
Table 43 – Properties of deuterated and normal heavy haloalkanes .....	149
Table 44 - Physical properties of heavy halogenated solvents at 20°C.....	150
Table 45 - Physical properties of heavy organometallics at 20°C.....	151
Table 46 – Classification and denominations of solubility ranges.....	158
Table 47 – Debye-Hückel limiting slope and partial molal volume of salts .....	161
Table 48 – Density of saturated aqueous solutions of inorganic salts .....	163
Table 49 – Classification of enthalpies of solutions .....	170
Table 50 – Degree of ionization of salt types .....	172
Table 51 – Enthalpy of solution of selected inorganic salts .....	178

Table 52 – Physical properties of selected metal fluorides.....	180
Table 53 – Hazards of rubidium fluoride .....	182
Table 54 – Solubility and density of satd. solns. of cesium fluoride vs. temperature .....	183
Table 55 – Hazards of cesium fluoride (caesium fluoride).....	184
Table 56 – Solubility and density of satd. solns. of silver(I) fluoride vs. temperature .....	185
Table 57 – Hazards of silver(I) fluoride (silver fluoride) .....	187
Table 58 – Hazards of thallium(I) fluoride (thallous fluoride) .....	189
Table 59 – Solubility and density of satd. solns. of antimony(III) fluoride vs. temperature	190
Table 60 – Hazards of antimony(III) fluoride (antimony trifluoride) .....	191
Table 61 – Physical properties of selected metal chlorides .....	192
Table 62 – Solubility and density of satd. solns. of rubidium chloride vs. temperature.....	193
Table 63 – Hazards of rubidium chloride.....	194
Table 64 – Solubility and density of satd. solns. of cesium chloride vs. temperature.....	195
Table 65 – Hazards of cesium chloride (caesium chloride) .....	196
Table 66 – Solubility and density of satd. solns. of zinc chloride vs. temperature .....	198
Table 67 – Hazards of zinc chloride.....	199
Table 68 – Solubility and density of satd. solns. of cadmium chloride vs. temperature.....	200
Table 69 – Hazards of cadmium chloride.....	201
Table 70 – Solubility and density of satd. solns. of iron(III) chloride vs. temperature .....	202
Table 71 – Hazards of iron(III) chloride (ferric chloride).....	203
Table 72 – Solubility and density of satd. solns. of tin(II) chloride vs. temperature.....	204
Table 73 – Hazards of tin(II) chloride (stannous chloride).....	204
Table 74 – Hazards of tin(IV) chloride (stannic chloride) .....	205
Table 75 – Solubility and density of satd. solns. of antimony(III) chloride vs. temperature	206
Table 76 – Solubility of antimony(III) chloride in glacial acetic acid vs. temperature .....	206
Table 77 – Hazards of antimony(III) chloride (antimony trichloride) .....	207
Table 78 – Hazards of uranyl chloride .....	209
Table 79 – Physical properties of selected metal bromides.....	210
Table 80 – Solubility and density of satd. solns. of lithium bromide vs. temperature .....	211
Table 81 – Hazards of lithium bromide .....	212
Table 82 – Solubility and density of satd. solns. of rubidium bromide vs. temperature .....	213
Table 83 – Hazards of rubidium bromide .....	214
Table 84 – Hazards of cesium bromide (caesium bromide) .....	215
Table 85 – Hazards of magnesium bromide .....	217
Table 86 – Solubility and density of satd. solns. of calcium bromide vs. temperature .....	218
Table 87 – Hazards of calcium bromide .....	219
Table 88 – Solubility and density of satd. solns. of strontium bromide vs. temperature .....	220
Table 89 – Hazards of strontium bromide .....	221
Table 90 – Solubility and density of satd. solns. of barium bromide vs. temperature .....	222
Table 91 – Hazards of barium bromide .....	223
Table 92 – Solubility and density of satd. solns. of zinc bromide vs. temperature .....	224
Table 93 – Hazards of zinc bromide .....	225
Table 94 – Hazards of copper(II) bromide (cupric bromide).....	226
Table 95 – Solubility and density of satd. solns. of cadmium bromide vs. temperature .....	227
Table 96 – Hazards of cadmium bromide .....	227
Table 97 – Physical properties of selected metal iodides.....	229
Table 98 – Solubility and density of satd. solns. of lithium iodide vs. temperature .....	230
Table 99 – Hazards of lithium iodide .....	231
Table 100 – Solubility and density of satd. solns. of sodium iodide vs. temperature .....	232
Table 101 – Hazards of sodium iodide .....	233
Table 102 – Solubility and density of satd. solns. of potassium iodide vs. temperature .....	234
Table 103 – Hazards of potassium iodide .....	235
Table 104 – Solubility and density of satd. solns. of rubidium iodide vs. temperature .....	236

Table 105 – Hazards of rubidium iodide.....	237
Table 106 – Solubility and density of satd. solns. of cesium iodide vs. temperature.....	238
Table 107 – Hazards of cesium iodide (caesium iodide) .....	239
Table 108 – Solubility and density of satd. solns. of ammonium iodide vs. temperature.....	240
Table 109 – Hazards of ammonium iodide.....	241
Table 110 – Solubility and density of satd. solns. of magnesium iodide vs. temperature .....	242
Table 111 – Hazards of magnesium iodide.....	243
Table 112 – Solubility and density of satd. solns. of calcium iodide vs. temperature.....	244
Table 113 – Hazards of calcium iodide.....	245
Table 114 – Solubility and density of satd. solns. of strontium iodide vs. temperature .....	246
Table 115 – Hazards of strontium iodide.....	247
Table 116 – Solubility and density of satd. solns. of barium iodide vs. temperature.....	248
Table 117 – Hazards of barium iodide.....	249
Table 118 – Solubility and density of satd. solns. of zinc iodide vs. temperature .....	250
Table 119 – Hazards of zinc iodide .....	251
Table 120 – Solubility and density of satd. solns. of cadmium iodide vs. temperature .....	252
Table 121 – Hazards of cadmium iodide.....	253
Table 122 – Hazards of potassium iodomercurate .....	255
Table 123 – Physical properties of selected metal thiocyanates.....	258
Table 124 – Physical properties of selected metal chlorates and bromates .....	260
Table 125 – Hazards of calcium chlorate .....	262
Table 126 – Hazards of strontium chlorate .....	264
Table 127 – Solubility and density of satd. solns. of cobalt(II) chlorate vs. temperature .....	265
Table 128 – Solubility and density of satd. solns. of copper(II) chlorate vs. temperature .....	266
Table 129 – Solubility and density of satd. solns. of zinc chlorate vs. temperature .....	267
Table 130 – Hazards of zinc chlorate.....	268
Table 131 – Solubility and density of satd. solns. of cadmium chlorate vs. temperature .....	268
Table 132 – Solubility and density of satd. solns. of lithium chlorate vs. temperature .....	270
Table 133 – Solubility and density of satd. solns. of lithium bromate vs. temperature .....	271
Table 134 – Physical properties of selected metal perchlorates .....	274
Table 135 – Solubility and density of satd. solns. of silver(I) perchlorate vs. temperature .....	275
Table 136 – Hazards of silver(I) perchlorate .....	276
Table 137 – Solubility and density of satd. solns. of sodium perchlorate vs. temperature .....	277
Table 138 – Hazards of sodium perchlorate.....	278
Table 139 – Solubility and density of satd. solns. of barium perchlorate vs. temperature .....	279
Table 140 – Hazards of iron(III) perchlorate (ferric perchlorate) .....	281
Table 141 – Hazards of lead(II) perchlorate .....	282
Table 142 – Physical properties of selected metal nitrates (Part I).....	284
Table 143 – Physical properties of selected metal nitrates (Part II) .....	285
Table 144 – Solubility and density of satd. solns. of silver(I) nitrate vs. temperature .....	286
Table 145 – Hazards of silver(I) nitrate .....	287
Table 146 – Solubility and density of satd. solns. of rubidium nitrate vs. temperature .....	288
Table 147 – Hazards of rubidium nitrate anhydrous .....	289
Table 148 – Solubility and density of satd. solns. of calcium nitrate vs. temperature .....	290
Table 149 – Hazards of calcium nitrate anhydrous .....	291
Table 150 – Solubility and density of satd. solns. of manganese(II) nitrate vs. temperature .....	292
Table 151 – Hazards of manganese(II) nitrate .....	293
Table 152 – Solubility and density of satd. solns. of cobalt(II) nitrate vs. temperature .....	294
Table 153 – Hazards of cobalt(II) nitrate .....	295
Table 154 – Solubility and density of satd. solns. of nickel(II) nitrate vs. temperature .....	296
Table 155 – Hazards of nickel(II) nitrate .....	297
Table 156 – Solubility and density of satd. solns. of copper(II) nitrate vs. temperature .....	298
Table 157 – Hazards of copper(II) nitrate (cupric nitrate) .....	299

Table 158 – Solubility and density of satd. solns. of cadmium nitrate vs. temperature.....	300
Table 159 – Hazards of cadmium nitrate.....	301
Table 160 – Hazards of cerium(III) nitrate .....	303
Table 161 – Hazards of terbium(III) nitrate .....	304
Table 162 – Hazards of uranyl nitrate .....	305
Table 163 – Physical properties of selected metal nitrites.....	306
Table 164 – Hazards of potassium nitrite.....	308
Table 165 – Physical properties of selected metal hydroxides .....	310
Table 166 – Hazards of rubidium hydroxide .....	312
Table 167 – Hazards of cesium hydroxide (caesium hydroxide) .....	314
Table 168 – Physical properties of selected metal carbonates.....	315
Table 169 – Hazards of rubidium carbonate .....	317
Table 170 – Hazards of cesium carbonate (caesium carbonate) .....	318
Table 171 – Physical properties of selected metal sulfates and selenates.....	320
Table 172 – Solubility and density of satd. solns. of rubidium sulfate vs. temperature.....	321
Table 173 – Hazards of rubidium sulfate .....	322
Table 174 – Solubility and density of satd. solns. of rubidium selenate vs. temperature .....	323
Table 175 – Hazards of rubidium selenate .....	324
Table 176 – Solubility and density of satd. solns. of cesium sulfate vs. temperature.....	325
Table 177 – Hazards of cesium sulfate (caesium sulfate) .....	326
Table 178 – Solubility and density of satd. solns. of cesium selenate vs. temperature .....	327
Table 179 – Hazards of cesium selenate (caesium selenate) .....	328
Table 180 – Hazards of iron(III) sulfate pentahydrate .....	330
Table 181 – Solubility and density of satd. solns. of zinc sulfate vs. temperature.....	331
Table 182 – Hazards of zinc sulfate.....	332
Table 183 – Hazards of zinc selenate pentahydrate.....	333
Table 184 – Solubility and density of satd. solns. of cadmium sulfate vs. temperature .....	334
Table 185 – Hazards of cadmium sulfate .....	335
Table 186 – Solubility and density of satd. solns. of cadmium selenate vs. temperature .....	336
Table 187 – Hazards of cadmium selenate .....	337
Table 188 – Hazards of lead(II) sulphamate .....	338
Table 189 – Physical properties of selected metal chromates and dichromates .....	340
Table 190 – Solubility and density of satd. solns. of chromium(VI) oxide vs. temperature.	341
Table 191 – Hazards of chromium(VI) oxide.....	342
Table 192 – Solubility and density of satd. solns. of sodium dichromate vs. temperature .....	343
Table 193 – Hazards of sodium dichromate .....	344
Table 194 – Solubility and density of satd. solns. of magnesium dichromate vs. temp. ....	345
Table 195 – Physical properties of selected metal metastannates .....	346
Table 196 – Physical properties of molybdates of alkali-metals.....	348
Table 197 – Hazards of potassium molybdate.....	350
Table 198 – Hazards of rubidium molybdate .....	352
Table 199 – Hazards of cesium molybdate (caesium molybdate) .....	354
Table 200 – Physical properties of tungstates of alkali-metals .....	356
Table 201 – Physical properties of insoluble cesium heteropolytungstates .....	365
Table 202 – Hazards of cesium tungstate (caesium tungstate).....	366
Table 203 – Hazards of rubidium tungstate .....	368
Table 204 – Chemical formula and color of hydrated tungstic acid.....	371
Table 205 – Physical properties of metatungstates of alkali-metals and ammonium .....	373
Table 206 – Names example for a selected heteropolytungstates anion .....	380
Table 207 – Physical properties of metatungstic and heteropolytungstic acids .....	382
Table 208 – Hazards of silicotungstic acid .....	384
Table 209 – Hazards of phosphotungstic acid .....	386
Table 210 – Physical properties of selected metal heteropolytungstates.....	388

Table 211 – Solubility and density of satd. solns. of lithium silicotungstate vs. temp.....	389
Table 212 – Hazards of a solution of lithium silicotungstate .....	390
Table 213 – Hazards of cadmium borotungstate.....	392
Table 214 – Physical properties of selected metal hexatantalates.....	394
Table 215 – Physical properties of selected metal perrhenates .....	398
Table 216 – Crystal structures and lattice parameters of anhydrous metal perrhenates .....	399
Table 217 – Crystal structures and lattice parameters of hydrated metal perrhenates .....	399
Table 218 – Physical properties of selected metal hexafluorosilicates.....	410
Table 219 – Physical properties of selected metal hexafluorogermanates .....	413
Table 220 – Physical properties of mono-, poly-, and aromatic carboxylic acids .....	416
Table 221 – Physical properties of selected metal formates .....	417
Table 222 – Solubility and density of satd. solns. of potassium formate vs. temperature ....	418
Table 223 – Hazards of potassium formate .....	420
Table 224 – Solubility and density of satd. solns. of rubidium formate vs. temperature....	421
Table 225 – Hazards of rubidium formate .....	422
Table 226 – Solubility and density of satd. solns. of cesium formate vs. temperature .....	423
Table 227 – Physical properties of solutions of potassium, rubidium and cesium formates	424
Table 228 – Hazards of cesium formate (caesium formate) .....	425

# 6 Index

1,1,2,2 – Tetrabromoethane	118	Bis(trifluoromethanesulfonyl)imide	459
12-metatungstic acid	374	Bistriflimidic acid	415, 459
12-tungstoboric acid	384	Born-Haber cycle	166
12-tungstoposphoric acid	385	Borotungstic acid	384
12-tungstosilicic acid	383	Bouger's law	490
Abbé precision refractometer	50	Brauns' liquor	133
Absolute density	27	Bromoform	99
Acetic acid	415	Brownian movement	68
Acetylene tetrabromide	118	Bulk density	27
Addendum atom	379	Bulk modulus (isentropic)	46
Air classification	77	Buoyancy force	38, 65
Ammoniacal silver	286	<i>Bureau de Recherches Géologiques et Minières</i>	481
Ammonium iodide	239	<i>Cabot Specialty Fluids</i>	496
Ammonium metatungstate	378	Cadmium borotungstate	391
Ammonium polytungstate	378	Cadmium bromide	226
Antimony(III) chloride	205	Cadmium chlorate	268
Antimony(III) fluoride	189	Cadmium chloride	200
<i>Anton-Parr GmbH</i>	48	Cadmium iodide	251
Apparent density	27	Cadmium mesylate	453
Apparent mass	38	Cadmium methanesulfonate	453
Apparent molal volume	159	Cadmium nitrate	299
Apparent weight	38	Cadmium perrhenate	409
Archimedes theorem	38	Cadmium selenate	335
Areometers	43	Cadmium sulfate	333
Arsenic(III) bromide	474	Caesium acetate	428
Athermic dissolution	350, 352, 357, 367	Caesium benzoate	442
Athermic dissolution reaction	168	Caesium bromide	214
<i>ATI-Wah Chang</i>	360, 361	Caesium carbonate	317
Attenuation	490	Caesium chloride	194
Attenuation law	490	Caesium citrate	449
<i>Australian Mineral Industries Research Association Limited</i>	389	Caesium fluoride	182
Barite	475	Caesium formate	422
Barium bromide	221	Caesium hydroxide	312
Barium iodide	247	Caesium iodide	237
Barium iodocadmiate	257	Caesium molybdate	352
Barium iodomercurate	256	Caesium nitrite	309
Barium iodomercurate(II)	256	Caesium oxalate	435
Barium iodozincate	257	Caesium salicylate	444
Barium perchlorate	279	Caesium sulfate	324
Barium tetraiodozincate	257	Caesium thiocyanate	259
<i>Bausch &amp; Lomb</i>	50	Caesium trichloroacetate	433
Benzoic acid	415	Caesium trifluoroacetate	433
<i>BHP Minerals International Inc.</i>	372, 374	Caesium trifluoromethanesulfonate	457

Caesium tungstate	356	Cesium oxalate	435
Caesium wolframate	356, 357	Cesium permanganate	363
Calcium bromide	217	Cesium salicylate	444
Calcium chlorate	261	Cesium selenate	326
Calcium iodide	243	Cesium sulfate	324
Calcium iodomercurate	256	Cesium sulfocyanide	259
Calcium nitrate	289	Cesium thiocyanate	259
Calcium perrhenate	404	Cesium trichloroacetate	433
Calcium tetraiodomercurate(II)	256	Cesium trichloroethanoate	433
Calibrated beads	44	Cesium triflate	457
Carboxylic acids	415	Cesium trifluoroethanoate	433
<i>Cargille Laboratories</i>	475	Cesium trifluoromethanesulfonate	457
Castleman's function	68	Cesium tungstate	356, 357
Center of buoyancy	65	Cesium tungsten bronzes	363
Centrifugation		Channing's solution	254
Angular speed	84	<i>Chemical Abstracts Service Registry Number</i>	
Angular velocity	83		527
Centrifuge factor	85	<i>Chemours</i>	98
Centrifuge force	83	Chromic acid	341
Clearing factor	85	Chromium(VI) oxide	340
Fixed angle rotors	86	Citric acid	415
Frequency	84	Clausius-Mossotti equation	51, 54
g-force	84	Clerici's solution	437
Radius of gyration	84	Cobalt(II) chlorate	264
Relative centrifugal force	84	Cobalt(II) nitrate	293
Rotational velocity	84	Cobalt(II) perrhenate	407
Sedimentation time	85	Cobaltous nitrate	293
Settling time	85	Coefficient of thermal expansion	25
Swing-bucket rotor	87	Compressibility (isentropic)	46
Terminal settling velocity	84	Compton incoherent scattering	490
Cerium(III) nitrate	301	Constricted tubes	88
Cerous nitrate	301	Copper(II) bromide	225
Cesine	312	Copper(II) chlorate	265
Cesium acetate	428	Copper(II) fluosilicate	411
Cesium benzoate	442	Copper(II) hexafluorosilicate	411
Cesium bromide	214	Copper(II) nitrate	297
Cesium carbonate	317	Copper(II) perrhenate	408
Cesium chloride	194	Copper(II) silicofluoride	411
Cesium citrate	449	Coquimbite	328
Cesium ethanedioate	435	Co-volume	30, 158
Cesium ethanoate	428	Cryogenic freezing	87
Cesium ferrate	363	Cupric bromide	225
Cesium ferrite	363	Cupric chlorate	265
Cesium fluoride	182	Cupric fluosilicate	411
Cesium formate	422	Cupric nitrate	297
Cesium hexantantalate	395	Cupric perrhenate	408
Cesium hydroxide	312	Cupric silicofluoride	411
Cesium iodide	237	Curie temperature	476
Cesium manganate	363	<i>De Beers</i>	337
Cesium manganite	363	Debye-Hückel limiting slope	160
Cesium methanoate	422	Degree of ionization	172, 174
Cesium molybdate	352	Dense Medium Separation	60
Cesium nitrite	309	Density	25

Absolute	27	Ferrofluids	487
Apparent	27	Ferrohydrodynamics	487
Aqueous solutions	158, 159	Ferrosilicon	477
Bulk	27	Finkelstein reaction	147
Miscible liquids	30	Fixed bed	73
Solid mixtures	29	Float-and-Sink method	60
Tap	27	Fluidization	
Theoretical	26	Bubbling	74
True	27	Dilute	74
x-ray	26	Smooth	74
Density gradient centrifugation method	94	Fluidized bed	74
Density markers	44	Formic acid	415
Density of the suspension	475	Fraunhauser sodium D-line	51
Deuterated halogenated solvents	148	Free-settling ratio	69
Deuteration	148	Freezing temperature drop	171
Deuterium oxide	460	Freon® R11	98
Diameter of a circle		Fused salts	465
Equal perimeter	37	Galena	477
Equal projection area	36	Galinstan®	484
Diethyl ortho-phthalate	43	Gallic acid	415
Diiodomethane	133	Gallium	483
Dissociation energy	166	<i>Geratherm Medical AG</i>	484
Dissolution enthalpy	165	Gladstone and Dale equation	54
Drag force	65	Gore method	186
Drilling fluids	495	Group contributions	52
Drilling muds	495	Half-value thickness	491
Duboin's liquor	256	Haloform reaction	102
<i>Duriron Company, Inc.</i>	477	Haloforms	99
<i>Duriron®</i>	477	Heat of dilution	169
<i>E.I. DuPont de Nemours</i>	98	Heat of solution	165
<i>Eastman Organic Chemicals</i>	431, 437	Heavy brines	496
Effective density	67	Heavy drilling fluids	496
Einstein's equation	72	Heavy Medium Separation	60
Empirical drag coefficient	66	Heavy water	460
Endothermic dissolution reaction	167	Helium gas pycnometer	43
Enthalpy of dilution	169	Helium pycnometer	27
Enthalpy of formation	168, 169	<i>Henry Tremmer Inc.</i>	39
Enthalpy of hydration	167	Heteroatom	379
Enthalpy of solution	165	Heteropolyacids	379
Ergun equation	75	Heteropolyanion	379
European Community number	528	Heteropolytungstates	380
<i>European Inventory of Existing Commercial Chemical Substances</i>	528	Heteropolytungstic acids	381
Eutectic mixture	470	Hexacoltanates	392
Eutectic system	470	Hexaniobiate anions	393
Exothermic dissolution reaction	167	Hexatantalate anions	393
Factor K	68	High-silicon cast iron	477
Falling ball viscometer	49	Hindered settling	69
Feret diameters	37	Hindered settling ratio	70
Ferric perchlorate	280	Hooke's equation	46
Ferric sulfate	328	Höppler principle	49
Ferrics chloride	201	Hydration	167
		Hydration energy	167
		Hydraulic conveying	74

Hydraulic elutriation	77	Lethal concentration	527
Hydrocyclone	79	Lethal dose	527
Barrel	79	Limnology	199
Dense medium cyclones	78	Lindqvist structure	392
Discharge hopper	80	Linear attenuation coefficient	490
Fractional collection efficiency	82	Liquefied oxygen gas	487
Impact time	82	Liquid elutriation	77
Number of effective turns	81	Liquid oxygen	487
Number of spirals	82	Liquid xenon	486
Overflow pipe	80	Lithium bromate	271
Particle size cut-off	81	Lithium bromide	210
Residence time	82	Lithium chlorate	270
Tangential feed inlet	79	Lithium fluogermanate	414
Total collection efficiency	83	Lithium hexafluorogermanate	414
Underflow	79	Lithium iodide	229
Vortex finder	80	Lithium metatungstate	374
Hydrogeno-tungstate anion	370	Lithium perrhenate	402
Hydrometer	43	Lithium polytungstate	374
Hydromolysite	202	Lithium silicotungstate	389
Hypobromite	103	Lithium triflate	456
Hypobromous acid	103	Lithium trifluoromethanesulfonate	456
<i>Iluka Resources</i>	389	Lorentz and Lorenz equation	51, 54
Immediately Dangerous to Life or Health	527	Magnesium bichromate	344
Inactinic glass	100	Magnesium bromide	215
Intermediate law	68	Magnesium dichromate	344
<i>International Organization for Standardization</i>	515	Magnesium iodide	241
Ionic strength	160	Magnesium perrhenate	403
Ionizing radiations	489	Magnetic levitation	486
Iron(II) chloride	201	Magnetite	476
Iron(II) perrhenate	406	Magneto-Archimedes effect	486
Iron(III) perchlorate	280	Magnetohydrostatic separation	487
Iron(III) perrhenate	406	Malonic acid	415
Iron(III) sulfate	328	Manganese(II) nitrate	291
Isotopologues	148	Manganese(II) perrhenate	405
Keggins's structure	368, 379, 380	Mass attenuation coefficient	491
Kimberlite	481	Mass concentration	157
Klein's liquor	390	Mass density	25
Labelled molecules	148	Mass fraction of solute	154
Lamproite	481	Mass refraction	51
Lattice energy	166	Mass solubility ratio	154
Lead(II) chlorate	269	Masson's equation	160
Lead(II) chloride	468	Maxwell electromagnetic theory	54
Lead(II) disulphamate	337	<i>Merik Darmstadt</i>	133
Lead(II) fluosilicate	411	Mercurous nitrate	469
Lead(II) hexafluorosilicate	411	Mercury	481, 483
Lead(II) mesylate	454	Mercury(I) nitrate	469
Lead(II) methanesulfonate	454	Mercury(II) bromide	468
Lead(II) perchlorate	281	Mesh size	35
Lead(II) silicofluoride	411	Mesylates	450
Lead(II) sulfamate	337	<i>Metallos Technology Metals</i>	484
Lead(II) sulphamate	337	Metatungstate anion	370
		Metatungstic acid	374
		Methanesulfonic acid	415, 450

Methylene iodide	133	Potassium iodomercurate	253
Micro-plastics	199	Potassium metastannate	347
Mikasaite	328	Potassium methanoate	418
Minimum fluidization velocity	73, 75	Potassium nitrite	307
Mixing and dilution rules	30	Potassium stannate(IV)	347
Mohr-Westphal hydrostatic balance	39	Potassium tetraiodomercurate(II)	253
Molar enthalpy of dilution	169	Preferred numbers	36
Molar enthalpy of solution	165	Pressure drop per unit of bed height	75
Molar refraction	51	Pseudo-metatungstate anion	370
Molar refraction of a mixture	57	Pycnometer	41
Molar refractivity	51	Pycnometry	41
Molar solubility ratio	156	Four-mass method	42
Molarity of solute	157	Three-mass method	41
Molten salts	465	Radiographic testing (RT)	494
Muds		Radioprotection	489
Oil-based	495	Rao's equation	47
Water-based	495	Raoult's cryoscopic constant	171
Muthmann's liquor	118	Raoult's ebullioscopic constant	174
<i>National Institute for Occupational Safety and Health</i>	527	Raoult's law of tonometry	170
Nessler's reagent	254	Rayleigh coherent scattering	490
Newton's law	66, 68	Real density	27
Nickel(II) nitrate	295	Rector's Solution	473
Nickel(II) perrhenate	407	Redlich-Rosenfeld-Mayer equation	161
Non-destructive evaluation (NDE) techniques	494	Refractive index	50
Number of apertures	35	Refractivity	51
Optical anomaly	53	Refractometry	50
Ortho-tungstate anion	370	Renard series	36
<i>Otisca Industries, Ltd.</i>	98	Retger's liquor	474
Otisca's Process	98	Reynolds number	
Oxalic acid	415	Fluid	50
Oxopnictates	392	Solid particle	66
Pair production	490	Reynolds number of the solid particle	68
Paratungstate A anion	370	<i>Rio Tinto</i>	389
Paratungstate B anion	370	Rock-forming minerals	63
Partial molal volume	160	<i>Rohm and Haas</i>	372
Penfield's solution	473	Rohrbach liquor	256
Perrhenates	396	Roundness	38
Perrhenic acid	396, 399	Rubidine	310
Pfizer equation	162	Rubidium benzoate	442
Pfizer parameters	162	Rubidium bromide	212
Phi scale	35	Rubidium carbonate	315
Phosphotungstic acid	385	Rubidium chloride	193
Photoelectric effect	490	Rubidium citrate	448
Photonuclear reaction	490	Rubidium ethanedioate	434
Phthalic acid	415	Rubidium fluoride	180
Porosity	27	Rubidium formate	420
Potassium citrate	447	Rubidium hexatantalate	395
Potassium fluogermanate	414	Rubidium hydroxide	310
Potassium formate	418	Rubidium iodide	235
Potassium hexafluorogermanate	414	Rubidium methanoate	420
Potassium iodide	233	Rubidium molybdate	348, 350
		Rubidium nitrate	287
		Rubidium nitrite	308

Rubidium oxalate	434	Syneresis	72
Rubidium salicylate	443	Tap density	27
Rubidium selenate	322	Terbium(III) nitrate	303
Rubidium sulfate	321	Terminal settling velocity	66
Rubidium sulfocyanide	258	Thallium(I) acetate	430
Rubidium thiocyanate	258	Thallium(I) ethanoate	430
Rubidium trichloroacetate	432	Thallium(I) fluoride	187
Rubidium triflate	457	Thallium(I) formate	425
Rubidium trifluoroacetate	433	Thallium(I) malonate	436
Rubidium trifluoromethanesulfonate	457	Thallium(I) methanoate	425
Rubidium tungstate	366	Thallium(I) salicylate	445
Salicylic acid	415	Thallous acetate	430
Schröder's liquor	99	Thallous fluoride	187
Sedimentology	199	Thallous formate	425
Short-term exposure limit	527	Thallous malonate	436
Silicotungstic acid	383	Thallous salicylate	445
Silver(I) fluoride	184	Theoretical density	26
Silver(I) nitrate	285	Thermochemical cycle	165
Silver(I) perchlorate	274	Thoulet's liquor	254
Sink-float method	60	Thoulet-Sonstadt's liquor	255
<i>Sinomine Specialty Fluids</i>	496	Time-weighted average	527
Snell-Descartes' law of refraction	50	Tin(II) chloride	203
Sodium bichromate	342	Tin(II) mesylate	453
Sodium dichromate	342	Tin(II) methanesulfonate	453
Sodium iodide	231	Tin(IV) bromide	469
Sodium iodomercurate	255	Tin(IV) chloride	204
Sodium metatungstate	375	Tin(IV) iodide	474
Sodium perchlorate	276	Tribromomethane	99
Sodium perrhenate	403	Tribromomethane-D	148
Sodium polytungstate	375	Trichloroacetic acid	415
Sodium tetaiodomercurate(II)	255	Trifluoroacetic acid	415
Solid pulp density	475	Trifluoromethanesulfonic acid	415
Sonstadt liquor	253	True density	27
Souchine-Rohrbach liquor	256	Tungstate anion	370
Soulby formula	71	Tungsten bronzes	363
Specific gravity	29	Tungsten(VI) oxide	479
Specific heat of solution	168	Tungstic acid	371
Specific refractivity	51	Tyler mesh size	36
Specific weight	28	Tyler sieves series	35
Sphericity	37	<i>U.S. Bureau of Mines</i>	77
Sphericity factor	37, 69	<i>U.S. Bureau of Standards</i>	36
Stannic bromide	469	<i>U.S. Geological Survey</i>	54
Stannic chloride	204	U.S. sieves series	35
Stannous chloride	203	Udden's scale	35
Stokes' law	66, 68	UN number	528
Strontianite	246	<i>University of Nottingham</i>	486
Strontium bromide	219	<i>University of Western Australia</i>	389
Strontium chlorate	262	Uranyl chloride	207
Strontium iodide	245	Uranyl nitrate	304
Strontium perchlorate	278	Valency factor	160
Strontium perrhenate	405	van't Hoff equation	171, 173
Superficial fluid velocity	73	van't Hoff factor	171, 174
Surface mass density	492	Void fraction	

Bed	28	Wolframophosphoric acid	385
Particle	28	Wolframosilicic acid	383
Void ratio		X-ray density	26
Bed	28	Yellow tungstate anion	370
Particle	28	Zinc bromide	223
<i>W.S. Tyler Company, Inc</i>	36	Zinc chlorate	266
Wall factor	71	Zinc chloride	196
Water-in-salt electrolytes	497	Zinc iodide	249
Weight	65	Zinc perrhenate	408
Wentworth chart	35	Zinc selenate	332
<i>Weston Coal Company</i>	98	Zinc sulfate	330
Witherite	248	Zone settling	70
Wolframoboric acid	384		

## About the Author

Dr. François Cardarelli, President and Owner of the Canadian company *Electrochem Technologies & Materials Inc.*, is an industrial chemist with a strong physical-chemistry background and a doctorate in chemical engineering from the University Paul Sabatier (UPS) Toulouse III. He is the inventor and co-inventor of 16 patents, and the sole author of three reference handbooks published worldwide by Springer since 1996 and three professional monographs.

He has over 35 years of industrial experience in North America and Europe in developing electrochemical, chemical, and metallurgical processes for winning, refining or producing a variety of metals, alloys, and inorganic chemicals either from aqueous solutions or molten salts media.

A particular area of his professional expertise is the chemical, and electrochemical processing of mining residues, metallurgical wastes, and industrial effluents, the manufacture of industrial electrodes, the electrochemical production of vanadium electrolyte, the pyro- and hydrometallurgical production of vanadium, niobium, tantalum, and tungsten compounds and chemicals, and finally the manufacture of novel industrial materials. All these processes are covered by patents enforced in many jurisdictions.

Dr. François Cardarelli is a member in good standing of the following professional organizations and societies: *American Institute of Chemical Engineers* (AIChE) [Lifetime member], *American Chemical Society* (ACS), *Chemical Institute of Canada* (CIC), *Canadian Society for Chemical Engineering* (CSChE), *The Electrochemical Society* (ECS), *Mineralogical Society of America* (MSA), *Ordre des Chimistes du Québec* (OCQ), *The Oughtred Society* (OS), and *The Minerals, Metals and Materials Society* (TMS).

**François Cardarelli**

## Heavy Liquids for the Separation of Minerals: Their Preparation, Properties, and Uses

This concise monograph is primarily intended to describe the main physical and chemical properties of heavy organic liquids and dense aqueous solutions of inorganic salts used in mineralogical, metallurgical, and chemical laboratories worldwide for the separation by gravity of minerals, metallic ores, coal macerals, fossils, and gemstones along with plastics, glasses, ceramics and other synthetic materials. Moreover dense solutions of salts used in biology for the separation of nucleic acids, and other biological molecules of interest by density gradients centrifugation are also described.

For several heavy liquids, it provides a detailed description of the laboratory methods, and industrial processes utilized for their preparation along with the most efficient recovery and recycling techniques. Moreover, when available the occupational health and safety information for toxic chemicals and hazardous compounds used as heavy liquids is also provided to ensure safe practices in the work place.

Finally, their potential utilization in others fields such as X-ray and radiographic contrast agents, radiation shielding agents, non-destructive testing (NDT), water-in-salt electrolytes, drilling fluids, ballasts and counterweights due to their high density are described. The information has been presented in such a form that mineralogists, chemists, geologists, paleontologists, biologists, metallurgists, mineral processing engineers, scientists, professors, and technologists will have access to relevant scientific and technical information supported by key data gathered from several disseminated sources.

The following topics are covered:

- Dense media separation of minerals and ores by the sink-float method, elutriation, fluidization, centrifugation and density gradients;
- Heavy halogenated organic solvents;
- Dense aqueous solutions of inorganic salts;
- Dense salts in non-aqueous solvents;
- Dense molten salts and eutectics;
- Suspensions of heavy solids;
- Liquid metals and low melting point alloys;
- Non-conventional heavy liquids;
- Other uses;
- Appendices;
- Bibliography.
